INTEGRATING SYSTEMS FOR SUSTAINABLE DEVELOPMENT

Linking Human and Natural Components

The United Nations Sustainable Development Goals are recommendations to achieve a better and sustainable future for everyone.

Accomplishing them demands interdisciplinary solutions, because most global challenges are interlinked. However, many global challenges, such as environmental pollution, water scarcity, food security, biodiversity conservation, disease control, clean energy provision or climate change are analyzed and managed separately.

In this context, the 9th German-Brazilian Symposium on sustainable development aims at sharing experiences and state-of-the-art research on holistic and integrative approaches addressing various components of human and natural systems with hopes to identify and strengthen effective solutions for sustainability challenges in Brazil and Germany, two societies related to their cultural identity. We are looking forward to contributions from science, politics, economy and society.

Session Topics

- ▶ Managing climate and global system's processes
- ▶ Biodiversity and ecosystems services
- ▶ Water as a resource for sustainable Development
- ▶ Renewable energy
- ▶ Sustainable food production systems
- ▶ Forestry systems - renewable resources for growing demands
- ▶ Minor crops and their importance for bioeconomy
- ▶ Combining biophysical and socio-economic models
- ▶ Migration and communication (Socio-dynamics)
- ▶ Ethics for sustainable global change and healthy environment
- ▶ Improving human health
- ▶ Human environment interaction
- ▶ Binational programs and cooperation

Schloßplatz in Stuttgart
